STEEL FORMING SYSTEMS

The Art of Roll Forming

Steel Forming Systems is a leading manufacturer of metal roll formed components and produces high volume metal parts from a wide variety of steel types, coppers and aluminum substrates. We are a valuable source for producing metal assemblies of all shapes and sizes, tailored specifically to your companies needs.

Diversity is an important element of our business. Our processes and value-added services enable us to provide roll forming to numerous industries and locations across the United States. Regardless of the industry, or if you just require a simple channel, Steel Forming Systems can supply you.

Better. Value. Faster.

STEEL FORMING SYSTEMS

What is Roll Forming?

Roll forming is a continuous shaping operation, ideal for making components with a consistent profile running the entire length of the part, in which coiled sheet metal is passed through a horizontal series of rotating dies to produce a uniform cross-section shape.

Our large collection of non-proprietary tooling is available for more generic parts, eliminating upfront costs. Simple profiles, such as angles, u-channels and c-channels can often be produced without out the necessity of making new tooling.

STEEL FORMING SYSTEMS

On Demand and Custom Tooling

Steel Forming Systems maintains a large collection of nonproprietary tooling which can be manipulated at little or no cost to fit a wide variety of production demands.

With production of simple profiles such as u-channels or c-channels, on-demand tooling can provide a substantial costs savings for our customers.

Our engineering staff is dedicated to working with customers to develop custom production tooling for all their roll forming and stamping needs. For custom production projects, we will work with you to design and develop the tooling necessary to make your project a successful undertaking.

Our complete tooling center has all the equipment needed to make and maintain tooling, an advantage that saves our customers time and money.

STEEL FORMING SYSTEMS

Providing Roll Forming, Stamping, Robotic Welding, Automated Assembly, and Value-Added Services.

Steel Forming Systems, Inc is a national leader in manufacturing metal components. We are an optimal source for anything from simple sheet channels to multipart weldments and fixtures. With capabilities that include roll forming, punching and piercing, robotic welding, and assembly services, components can be fully fabricated in house, reducing costs while increasing better supervision and quality.

Value-Added Services

- Engineering
- Robotic Welding
- Resistance (Spot) Welding
- Stamping
- Brake Forming
- Roll Tooling and Die Manufacturing
- Machining
- Inventory Management and Logistics

ISO 9001 Certified QMS

CERTIFICATE OF REGISTRATION

The management system of certificate number **265093**

Steel Forming Systems

14080 172nd Ave., Grand Haven, MI, 49417, USA

has been assessed and certified as meeting the requirements of:

ISO 9001:2015

Manufacture of Custom Roll Formed Products

Further details regarding the scope of this certificate and the applicability of requirements may be obtained by consulting the certifier.

Initial certification: Friday, June 14, 2019
Current cycle start: Friday, June 13, 2025
Latest issue: Wednesday, April 9, 2025
Expiry date: Monday, June 12, 2028
Subject to annual assessments.

Certification structure: Single Site

Authorized by

Mike Tirms
Chief Executive Officer
